

### **Annual Reporting**

Each year, the County will develop a brief water quality report for the Withlacoochee River. This report will include:

- Monitoring results
- Trend analysis
- Documentation of activities
- Recommendations based on evaluations

The water quality data along with the trend analysis will be utilized to determine if the trend is showing improvement or degradation relative to implementing BMPs. If the trend analysis indicates that water quality is worsening or not improving, then additional sampling and/or BMPs will be evaluated to identify sources within the area covered by County's MS4 permit. A copy of this report and sampling results/data will be submitted along with the County's annual report.
