

Note: When figuring the costs per session providers should figure any and all costs associated with providing the SFP sessions and the end of cohort graduation ceremony. SFP 7-17 is a 12-session program so the total costs to provide a single cohort would be divided 12 to determine the per session cost. (As an example, if the total costs to provide a complete 12-week cohort totals \$12,000 then the cost per session would be \$1,000). As a reminder, each provider is required to provide a minimum of two (2) cohorts for a total of 24 sessions, however, additional cohorts may be conducted if time, referrals and funding allow. Providers are encouraged to thoroughly research the requirements and review their proposal prior to submission as additional costs will not be allowed once contract award has been made.
